

Eczema Care Online is a research project that aims to help people to self-manage their eczema. In this project we have reviewed the published evidence about the safety and effectiveness of topical corticosteroids.

Now we want to consult with key stakeholders about how findings can best be refined and disseminated to maximise their usefulness.

We are interested in hearing views from all types of stakeholders including people with eczema, parents/caregivers of children with eczema, dermatologists, dermatology nurses, general practitioners, health visitors, commissioners, pharmacists, and pharmacy staff.

Would you be interested in joining an online stakeholder event in March 2021?

We will share the latest evidence about topical corticosteroids and consider how this information might best inform clinical practice. The session will last 1.5 hours.

Please email linda.pycroft@nottingham.ac.uk to express your interest.
